                                                                                                                                                                  This SWISS PROT entry is copyright. It is produced through a between the Swiss Institute of Bioinformatics and the EMBI
                                                                                                                                                                                                                                                               SUBCELLULAR LOCATION: TYPE I MEMBRANE PROTEIN.

TISSUE SPECIFICITY: IFN RECEPTORS ARE PRESENT IN ALL TISSUES AND EVEN ON THE SURFACE OF MOST IFN-RESISTANT CELLS.

PTM: PHOSPHORYLATED ON TYROSINE RESIDUES BY TYK2 TYROSINE KINASE.

SIMILARITY: CONTAINS 2 FIBRONECTIN TYPE III-LIKE DOMAINS.

SIMILARITY: BELONGS TO THE CLASS II CYTOKINE FAMILY OF RECEPTORS.

new member of the cytokine receptor
at less than 35 kb from IFNAR.";
MO1. EVO1. 41:338-344(1995).
FUNCTION: IS PROBABLY INVOLVED IN THE INTERFERON SYSTEM.
SUBCELLULAR LOCATION: TYPE I MEMBRANE PROTEIN.
SIMILARITY: CONTAINS 2 FIBRONECTIN TYPE III-LIKE DOMAINS
SIMILARITY: BELONGS TO THE CLASS II CYTOKINE FAMILY OF RI
                                                                                                                                                                                                                                                                                                                                                                                                                                                       ProTrpArgArgAla.....ValCysGlyAspLeuThrSerLeuPheAs

FISSUE SPECIFICITY: BRAIN-SPECIFIC. PURKINJE CELLS CONTAINS.

PREDOMINANTLY P-TYPE VSCC, THE Q-TYPE BEING A PROMINENT CALCIUM PREDOMINENT IN CEREBELLAR GRANULE CELLS.

DOMAIN: EACH OF THE FOUR INTERNAL REPEATS CONTAINS FIVE HYDROPHOBIC TRANSMEMBRANE SEGMENTS (31, S2, S3, S5, S6) AND ONE POSITIVELY CHARGED TRANSMEMBRANE SEGMENT (54). S4 SEGMENTS PROBABLY REPRESENT THE VOLTAGE-SENSOR AND ARE CHARACTERIZED BY A SERIES OF POSITIVELY CHARGED AMINO ACIDS AT EVERY THIRD POSITION.

SERIES OF POSITIVELY CHARGED AMINO ACIDS AT EVERY THIRD POSITION.

SERIES OF POSITIVELY CHARGED AMINO ACIDS AT EVERY THIRD POSITION.
                                                                                                                                                                                                                                                                                                                                                                                                       SUBUNIT: VOLTAGE-DEPENDENT CALCIUM CHANNELS ARE MULTISUBUNIT SUBUNIT: VOLTAGE-DEPENDENT CALCIUM CHANNELS ARE MULTISUBUNITS COMPLEXES, CONSISTING OF ALPHA-1, ALPHA-2, BETA AND DELTA SUBUNITS IN A 1:1:1:1 RATIO. THE CHANNEL ACTIVITY IS DIRECTED BY THE PORE-FORMING AND VOLTAGE-SENSITIVE ALPHA-1 SUBUNIT. IN MANY CASES, THIS SUBUNIT IS SUFFICIENT TO GENERATE VOLTAGE-SENSITIVE CALCIUM CHANNEL ACTIVITY. THE AUXILIARY SUBUNITS BETA AND ALPHA-2/DELTA LINKED BY A DISULFIDE BRIDGE REGULATE THE CHANNEL ACTIVITY. SUBCELLULAR LOCATION: INTEGRAL MEMBRANE PROTEIN.

ALTERNATIVE PRODUCTS: IN THE BRAIN, A SHORT ISOFORM BI-1/1A-1 AND A LONG ISOFORM BI-2/IÀ-2 (SHOWN HERE), ARE PRODUCED BY ALTERNATIVE
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               IN A VARIETY OF CALCIUM-DEPENDENT PROCESSES, INCLUDING MUSCLE CONTRACTION, HORMONE OR NEUROTRANSHITTER RELEASE, GENE EXPRESSION, CELL MOTILITY, CELL DIVISION AND CELL DEATH. THE ISOFORM ALPHA-1A GIVES RISE TO P AND/OR O-TYPE CALCIUM CÜRRENTS. P/O-TYPE CALCIUM CÜRRENTS. P/O-TYPE CALCIUM CÜRRENTS. P/O-TYPE CALCIUM CÜRRENTS. P/O-TYPE CALCIUM CHANALELS BELONG TO THE "HIGH-VOLTAGE ACTIVATED" (HYA) GROUP AND ARE BLOCKED BY THE FUNNEL TOXIN. (FTX) AND BY THE OMEGA-AGATOXIN-IVA (OMEGA-AGA-IVA). THEY ARE HOMEYER INSENSITIVE TO DHYDROPYRIDINES (DHP), AND OMEGA-CONOTOXIN-GVIA (OMEGA-CTX-
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     GVIA)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    FUNCTION: VOLTAGE-SENSITIVE CALCIUM CHANNELS (VSCC) MEDIATE THE ENTRY OF CALCIUM IONS INTO EXCITABLE CELLS AND ARE ALSO INVOLVED
